BRADSHAW HOME DEMON- nine.

Club was held at the home of Mrs. Furniture. T. G. Sparcks on December 17th. Jan. 29—Miscellaneous

Children's Harmless Laxative

Children love the pleasant taste of "California Fig Syrup" and gladly take it even when bilious, feverish, sick, or constipated. No other laxative regulates the tender little bowels so nicely. It sweetens the stomach and starts the liver and bowels without cramping or overacting. Contains no narcotics or soothing drugs.

Tell your druggist you want only the genuine "California Fig Syrup" which has directions for babies and children of all ages printed on bottle. or you may get an imitation fig syrup,

D EGARDLESS of the kind of fuel you use, HEAT is what you actually want and actually buy, whether fuel to produce that HEAT is delivered to your HOME in a truck or thru a pipe line. Just as distance is measured in

inches and weight in ounces, HEAT is measured in B. T. U.'s (British Thermal Units). In order to compare the cost of COAL AND COKE with Natural Gas, compare the cost of the Heat or B. T. U.'s as furnished by each fuel.

Here is a very simple table by which you can easily determine what the same amount of HEAT you are now getting from your COAL OR COKE would cost you, if you substituted Natural Gas in your home. COST OF NATURAL GAS TO EQUAL HEAT UNITS IN A TON OF COAL OR COKE

@ 60 cents @ 60 cents @ 60 cents @ 60 cents 23,000,000 29,000,000 30,000,000 To figure what it would cost YOU to substitute Natural Gas for Coal

or Coke in your home heating plant, call your dealer and ask him how many B. T. U.'s per pound are contained in the Coal or Coke you are using. Then find this figure in the left hand column, and you'll find the comparative cost of Natural Gas in the last column on the right. Compare this cost with what you're paying now for Coal or Coke. FOR EXAMPLE: If the Coal or Coke you are burning contains 13,500 B. T. U.'s per pound, it contains (2000 times 13,500) 27,000,000 B. T. U.'s per ton. To produce 27,000,000 B. T. U.'s will require 27,000 cubic feet of natural gas. With Natural Gas at 60 cents per thousand cubic feet you will pay \$16.20 to get the same heat from Natural Gas as from one ton of the Coal or Coke you are now using. To find the difference in your home heating costs for the WINTER, merely multiply the cost per ton of your coal by the number of tons you use; then multiply \$16.20 by the number of tons you use and subtract the cost of Coal or Coke from the cost of Natural Gas, WHAT A SAVING! THAT'S WHY WE SAY—UNLESS YOU
